*Prices valid through 12/31/2016*

### A Note on Print Sizes

We use paper sizes (in inches) of 6.5x9.5, 13x19 (SuperB), 17x22, 20x24 and so on to describe the standard photographic paper sizes on which prints are traditionally made. The actual image size of the print will be somewhat smaller than these industry-standard photo paper sizes for the following reasons:

Borders: To assist handling and matting, all prints include a border. Thus, a paper size of 13x19 will have a maximum print area of 12x18.

Proportions: I use two camera formats: 35mm (3:2 ratio) and 67mm medium format (4:3 ratio). In the case of 35mm format, an un-cropped print on 13x19 paper can measure no more than 12x18 (12x16 for 67mm format). Some images have been cropped or blended together to other sizes for artistic reasons (nature doesn't always display herself in a 3:2 or 4:3 ratio). Therefore, a print will often be smaller in one of the two dimensions.

Over matting: To ensure that the mat window does not reveal any of the white borders around the print, the mat windows are cut very slightly smaller than the image area, obscuring a minimal area of the image along its edges (usually 3/16").

To eliminate any questions, we will respond to all order inquiries with the actual print, paper and mat sizes for the particular image of interest.
